

## WHAT IS CLAIMED IS:

1. An adhesion promoter for a primer, comprising a silane compound that is a reaction product between a polyisocyanate and a silane coupling agent having a secondary amino group, the nitrogen atom of which is directly connected to a phenyl group or a derivative thereof, the silane compound having in average at least one NCO group and in average at least one hydrolyzable alkoxysilyl group in the molecule.
2. An adhesion promoter for a primer according to claim 1, wherein the polyisocyanate is an aliphatic or alicyclic polyisocyanate.
3. An adhesion promoter for a primer according to claim 1, wherein the silane compound is a reaction product having a reaction ratio of  $\text{NCO/NH} = 3/1$  to  $3/2$ .
4. A primer composition comprising an adhesion promoter for a primer of claim 1 and a film forming resin.
5. A primer composition comprising an adhesion promoter for a primer of claim 2 and a film forming resin.

6. A primer composition comprising an adhesion promoter for a primer of claim 3 and a film forming resin.
